What is claimed is:

- 1. (Original) The use of a solution composed of at least one solvent and at least one nonionic surfactant as a carrier system for at least one active substance.
- 2. (Original) The use as claimed in claim 1, characterized in that the nonionic surfactant is an alkylphenoxy-polyethoxyethanol of the general formula

$$R^{1}$$
 (CH₂-CH₂-O)_n-H

in which R^1 is a straight-chain or branched alkyl group, preferably an isooctyl group, and n is preferably 9 or 10.

- 3. (Currently Amended) The use as claimed in claim 1 or 2, characterized in that the nonionic surfactant is present in the solution in a fraction of up to 99.99% by volume, preferably between 0.1% by volume and 75% by volume, in particular between 0.5% by volume and 20% by volume.
- 4. (Currently Amended) The use as claimed in one of the preceding—claims 3, characterized in that the solution is buffered and the pH of the solution is set between 7 and 10, in particular between 7 and 8.
- 5. (Currently Amended) The use as claimed in one of the preceding claims 4, characterized in that the solvent is a polar solvent, in particular water.
- 6. (Currently Amended) The use as claimed in one of the preceding claims 5, characterized in that the active substance is a washing-active substance, in particular an ionic or a nonionic surfactant.
- 7. (Currently Amended) The use as claimed in one of the

1

preceding—claims__6, characterized in that the active substance is a washing composition additive which is preferably selected from the group comprising softeners, bleaches, optical brighteners, complexing agents, enzymes, fragrances, textile softeners and discoloration inhibitors.

- 8. (Currently Amended) The use as claimed in one of claims—1 to 5, characterized in that the active substance is a cosmetic active ingredient which is selected from the group comprising vitamins, fruit acids, plant extracts, vegetable fats, vegetable oils, liposomes, ceramides, antimicrobial agents, glycerol and inflammation inhibitors.
- 9. (Currently Amended) The use as claimed in one of claims 1 to 5, characterized in that the active substance is a pharmaceutical active ingredient, in particular selected from the group comprising analysics, antiallergics and inflammation inhibitors.
- 10. (Currently Amended) The use as claimed in one of claims 1 to 5, characterized in that the active substance is a disinfectant.
- 11. (Original) A composition comprising:
 - a carrier system, preferably in the form of a solution composed of at least one nonionic surfactant in a fraction of up to 99.99% by volume, in particular between 0.1% by volume and 75% by volume, and at least one polar solvent, in particular water,
 - at least one active substance.
- 12. (Original) The composition as claimed in claim 11, characterized in that the nonionic surfactant in the carrier system is an alkylphenoxypolyethoxyethanol of the general formula

$$R^{1}$$
 (CH₂-CH₂-O)_n-H

in which R^1 is a straight-chain or branched alkyl group, preferably an isooctyl group, and n is preferably 9 or 10.

- 13. (Currently Amended) The composition as claimed in claim 11 or 12, characterized in that the carrier system is buffered and the pH of the carrier system is set between 7 and 10, in particular between 7 and 8.
- 14. (Currently Amended) The composition as claimed in $\frac{1}{1-1}$ one of claims $11-\frac{1}{1-1}$, characterized in that the active substance is a washing-active substance, in particular an ionic or a nonionic surfactant.
- 15. (Currently Amended) The composition as claimed in one of claims 11—to 14, characterized in that the active substance present is a washing composition additive which is preferably selected from the group comprising softeners, bleaches, optical brighteners, complexing agents, enzymes, fragrances, textile softeners, and discoloration inhibitors.
- 16. (Currently Amended) The composition as claimed in one of claims 11—to—13, characterized in that active substance present is a cosmetic active ingredient selected from the group comprising vitamins, fruit acids, plant extracts, vegetable fats, vegetable oils, liposomes, ceramides, antimicrobial agents, glycerol and inflammation inhibitors.
- 17. (Original) The composition as claimed in claim 16, characterized in that the cosmetic active ingredient is present in a concentration of up to 30% by weight, preferably of up to 10% by weight.
- 18. (Currently Amended) The composition as claimed in one of claims 11—to—13, characterized in that the active substance present is a pharmaceutical active ingredient, in particular selected from the group comprising analgesics, antiallergics, and inflammation inhibitors.

- 19. (Currently Amended) The composition as claimed in one of claims 11—to 13, characterized in that the active substance present is a disinfectant.
- 20. (Currently Amended) The composition as claimed in claim 18 or 19, characterized in that the active substance is present in the composition in a concentration of up to 30% by weight, preferably up to 10% by weight.
- 21. (Currently Amended) The composition as claimed in $\frac{\text{one} \text{of}}{\text{claims}}$ 11—to 15, comprising:
 - 0.1 25% by weight of an alkylphenoxypolyethoxyethanol of the formula I,
 - 0.1 50% by weight of at least one surfactant,
 - 1 70% by weight of at least one discoloration inhibitor,
 - optionally washing composition additives such as softeners, bleaches, optical brighteners, complexing agents, enzymes, fragrances and/or textile softeners and
 - optionally, as the remainder, at least one polar solvent, in particular water.
- 22. (Currently Amended) The composition as claimed in one of claims 11 to 15 or as claimed in claim 21, consisting of:
 - from 40% by volume to 60% by volume, preferably 50% by volume of a carrier system consisting of 2.5% by volume of isooctylphenoxypolyethoxyethanol and 97.5% by volume of a solution composed of 0.2% by weight of 37% hydrochloric acid, 0.5% by weight borax and water,
 - from 10% by volume to 20% by volume, preferably 15% by volume of Sokalan* HP 56 from BASF AG (aqueous, 30% solution of a copolymer of 1-vinylimidazole and 1-vinyl-2-pyrrolidone in water),
 - from 30% by volume to 40% by volume, preferably 35% by volume of Rimapur CX from Henrich Rimml in Zurich (aqueous solution of a nitrogen-containing polymer).

23. (Original) The use of a solution composed of at least one solvent and at least one alkylphenoxylpolyethoxyethanol of the general formula

$$R^{1}$$
 (CH₂-CH₂-O)_n-H

In which R^1 is a straight-chain or branched alkyl group, preferably an isooctyl group, and n is preferably 9 or 10,

- 24. (Original) The use as claimed in claim 23, characterized in that the alkylphenoxypolyethoxyethanol is present in the solution in a fraction of up to 99.99% by volume, preferably between 0.1% by volume and 75% by volume, in particular between 0.5% by volume and 20% by volume.
- 25. (Currently Amended) The use as claimed in claim 23—or 24, characterized in that the solution is buffered and the pH of the solution is set between 7 and 10, in particular between 7 and 8.
- 26. (Currently Amended) The use as claimed in one of claims 23 to 25, characterized in that the solvent is a polar solvent, in particular water.
